

ENVIRONMENTAL POLICY

For more than seventy years we have been producing cards and games which end up in the hands of players all over the world. During this time, we have been observing how people and our environment change. We see that human activity often does more harm than good, and we want our products not only to bring joy, but also the world around to become better every day.

As part of the company's environmental policy we declare:

- the full transparency of undertaken actions in the field of environmental protection;
- conducting activities that minimize the production of waste and consumption of natural resources;
- conducting activities that raise awareness and increase employees' engagement;
- encouraging coworkers and subcontractors to pro-environmental actions;
- continuous development of the ecological offer, which will also allow our customers to contribute to our objectives;
- compliance with legal regulations and standards as regards environmental protection;
- continuous improvement of the environmental management system.
